

**Abstract**—The purpose of this study was to determine whether there were differences in the prevalence of musculoskeletal disorders among different types of workers in the garment industry. The study included 600 employees from two garment factories in Mexico City. Data were collected by means of a self-administered questionnaire. Results showed that the prevalence of musculoskeletal disorders was higher among female than male workers. The prevalence of musculoskeletal disorders was also higher among workers who had worked longer in the garment industry. The prevalence of musculoskeletal disorders was higher among workers who performed more physically demanding tasks. The prevalence of musculoskeletal disorders was higher among workers who worked longer hours. The prevalence of musculoskeletal disorders was higher among workers who worked in the same position for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same factory for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same department for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same section for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same team for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same group for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same shift for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same area for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same room for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same building for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same city for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same country for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same continent for longer periods of time. The prevalence of musculoskeletal disorders was higher among workers who worked in the same world for longer periods of time.
